

# PubliGen

## ENTERPRISE CONTENT MANAGEMENT

### Complete on-line publication system

PubliGen is an enterprise content management solution designed for the rapid deployment of dynamic customized portals for Inter-Intra-Extranet sites.

PubliGen provides the ideal solution to the current problem of implementing web-based corporate information systems capable of providing a single access to document resources and applications and offering real-time updates by the content producers.

### Power of dynamic pages

Using only their standard web browser, content producers access the publication environment from where they can manage directly all the component parts of the site: graphic documents, resources, files, document databases, navigation structure, production, follow-up of connections.

### Integrated document database

A standard feature of PubliGen is the ability to integrate full index, full-text & keyword search functions into the document databases, making on-line publication of different file formats, such as MS Office documents, PDF files and HTML pages, much simpler: browsing is now performed in a genuine document database.

PubliGen allows users to build publication environments which integrate seamlessly with existing organization methods, thanks to the ability to accurately configure publication rights for each individual module (creation of documents, navigation management, move to production, etc).

### Open architecture

Based on existing security management systems (Windows NT, LDAP, Databases, etc) PubliGen allows users to build portals customized to each user profile.

### Characteristics

- 100% Web interface
- Template based online publishing
- Integrated document database
- Multilingual environment
- Automated standard features

### End User Module

- Contents, Image library, Files
- Key words, People, Units, Categories
- Tree structures
- Replication
- Connections
- Contribution database
- Forum, Chat
- Newsletter
- Survey, Quizz

### Administrator Module

- Create / Export sub-sites
- Trace database archiving
- Multi database management
- Secure sub-site
- Update PubliGen
- Template version control
- Deploy a template
- Management templates
- Servers monitoring

### Uses

- Customized portals
- Procedures Guides
- Knowledge bases
- Best practices
- Catalogs
- Forums, Bulletin Boards
- Live Chats
- Quiz and self training
- Real time polls
- Forms
- Mailing lists
- Content categorization
- Customized Newsletters
- Wireless optimized sites (PDA)
- EDM
- Knowledge Management

# PubliGen

## ENTERPRISE CONTENT MANAGEMENT

## Immediate Benefits

### Robust, reliable, upgradeable

Enjoy the benefits of PubliGen's robust, reliable and upgradeable publication and corporate portal management environment, which has already been successfully adopted by thousands of users to manage hundreds of inter-intra-extranet sites.

### Simplification

PubliGen offers an environment which is simple to use, simple to manage, simple to deploy and simple to maintain, thanks to a carefully thought-out ergonomic design, optimized procedures and the systematic use of all the benefits of on-line solutions (universal interface, centralization of resources on the server, etc).

### Harmonization

Our template system (presentation models pre-defined in accordance with your organization's standard graphic layout) means all documents produced are generated dynamically in line with a predetermined layout. Distinct style and content management within a given database allows such flexibility at publication level. Your organization's graphic design and ergonomic standards are therefore applied fully and transparently.

### Decentralization

Using a simple web browser and an Internet or Intranet connection, any team member can immediately begin contributing to the site. This straightforward deployment and ease of use encourages greater decentralization in the administration of the various sections of the service package.

### Validation

Although the content production process is very straightforward, having an effective control and validation process prior to publication remains important. Two-stage management (development & production) and batch replication allow the process to closely match each company's organization.

### Mutualization

Centralizing resources on a single server allows users to mutualize operating, deployment, update and maintenance costs.

### Customization

Profiles are used by all PubliGen modules, allowing you to fully customize resource usage for end-users, content producers and site administrators, with each person only able to view those resources for which he / she has been authorized.

## Configuration

### End User

- Internet Explorer 5+ (PC)

### Server

#### Operating system

- Windows NT 4 SP3
- Windows 2000
- Windows 2003

#### Web Server

- Microsoft IIS

#### Database

- Microsoft Access 97, 2000 +
- Microsoft SQL Server 6.5, 7, 2000
- Oracle 7.3, 4, 8

#### Minimum hardware configuration

- Pentium III
- 128 MB Ram
- 5 GB disk

#### Directories supported for authentication

- Microsoft NT domains
- Microsoft Active Directory

#### Directories supported for user synchronization

Connectors to configure or develop for:

- Microsoft Exchange 5.5
- Microsoft Exchange 2000
- LDAP compatible directory
- ERP (SAP, PEOPLESOFT, etc.)
- Other databases

#### Configuration & development languages supported

- Microsoft ASP
- Microsoft ASP.NET
